Vars - CamelCase hasMax

Structures - Capitalized Dog, Singular

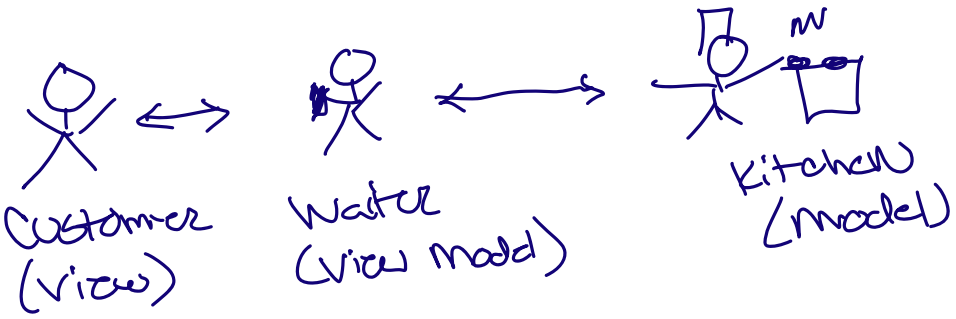
Functions - CamelCase

Declaration

var bookTitle: String

var bookTitle = "Illiad"

MVVM - Model View ViewModel Architecture



NavigationView

Push
Pop → Stack of Views

NavigationLink(dest ↗)

This has been depricated in iOS16. Need to find an updated approach.

1) Watch videos of new Navigation approach
Build updated NAV Sample for future use.

2) Rework State App w/ new Approach
3) Rework Question Gene w/ new Approach

Property Wrappers - preformat variable, State

@State holds/manages data local to a view if Δ then elements are redrawn!

Toggle - Bind to State variable.
